OM nucleic - nucleic search, using sw model	Run on: June 7, 2004, 15:33:46 ; Search time 3409 Seconds (without alignments) 10908.866 Million cell	Title: Perfect score: 858 Sequence: 1 atggccggcctcggccacccacaagaaggtagactcctg	Scoring table: IDENTITY NUC Gapop 10.0 , Gapext 1.0	Searched: 3470272 seqs, 21671516995 residues	Total number of hits satisfying chosen parameters: 6940544	Minimum DB seq length: 0 Maximum DB seq length: 200000000	Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries	GenEmbl:* 1

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinocransferases, enzymes involved in creatine and streptowycin biosynthesis respectively. Thi family also includes arginine deliminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + H2O <=>citrulline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein" |

This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.
These enzymes catalyse the reaction: arginine + H2O <=> cirtuline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein" | About 1 | About 2 | About 2 | About 3 | About 3 | About 3 | About 4 | About 4 | About 5 | About 5 | About 6 | About 6

//note=-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycinb biosytthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"

//note=-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomyorin biosynthesis respectively. This family also includes arginine detaminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the /db_xref="CDD:pfam02274"

This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and erreptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.
These enzymes catalyse the reaction: arginine + H2O <=> cirtuline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         394 TTATTCACAGGCAGAGAATTTTTTTGTGGGCCTTTCCAAAAGGACAAATCAACGAGGTGCT 453

Ince-"Amidinotransf; Region: Amidinotransferase. This family contains glycine (Ec.2.1.4.1) and incesmine (EC.2.1.4.2) and incesmine coeatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC.3.5.3.6. These enzymes catalyse. the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20

fonce="Mandinotransf" Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.6. These enzymes catalyse the reaction: arginine + H2O <=> ctrulline + NH3. Also found in this family is the ctreptococcus anti tumour glycoprotein" | Ab_xref="CDD:pfam02274"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                141 GlyLeuSerLysArgThrAsnGlnArgGlyAlaGlulleLeuAlaAspThrPheLysAsp 160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          81 AlaValValGysGluGluThrAlaLeuileThrArgProGlyAlaProSerArgArgLys 100

Ince-Amidinotransf; Region: Amidinotransferase. This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) and inosamine (EC:2.1.4.2) and dinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         40

                                                                                                                                                            Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consorthum(LinL at: http://image.llnl.gov Series: IRAK Plate: 129 Row: j Column: 20
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MetalaGlyLeuGlyHisProSerAlaPheGlyArgAlaThrHisAlaValValArgAla

NEDO CDNA sequencing project supported by Ministry of Economy,

Trade and Industry of Japan; CDNA full insert sequencing: Research

Association for Biotechnology (RAB); ObnA library construction:

Helix Research Institute (HRI) (supported by Japan Key Technology

Center etc.); 5- & 3-end one pass sequencing: RAB, HRI, and

Biotechnology Center, Wational Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

                                                                                                                                                 Clone distribution: MGC clone distribution information can be four through the I.M.A.G.E. Consortium/LiNL at: http://image.llnl.gov series: IRAK Plate: 132 Row: a Column: 19
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis
This clone has the following problem: The cds is short compared the longest cds in the locus.

//note=-Amidinotransf, Region: Amidinotransferase. This family contains glycine (EC:2.14.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and stresptowychin biosynthesis respectively. This family also includes arginine delminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumour glycoprotein"

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes argainine deiminases, EC:3.5.3.6.

These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococus anti tumor glycoprotein"

Neuherberg, GERMANY

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email s wiemann@dkfz-heidelberg.de;
sequenced by EMBL (Suropean Molecular Biology Laboratories,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project.

This clone (DKF2P586801716) is available at the RZPD in Berlin.
Please conteact the RZPD: Resegourcenzentrum, Heubnerweg 6, 14059

Berlin-Charlottenburg GERMANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available
at http://mips.gsf.de/proj/CoDA/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HSWHUB292 3908 bp mRNA linear PRI 30-AUG-2003

This family contains glycine (EC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + H2O <=> citrulline + NH3. Also found in this family is the Streptococcus anti tumor glycoprotein" | Abo. Exeptococcus anti tumor glycoprotein 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            177
